

Go-Live Readiness Note

Northstar Retail — Self-Serve Support ('Support Buddy')

Live URL northstar-support-buddy.lovable. app	Status Demo prototype — MVP, simulated data	Prepared by Eunice Livingproof · Team Northstar Sprint	Date 16 Aug 2026
--	--	---	----------------------------

What Works

Area	Status
Order status lookup	Self-serve order ID input (e.g. ORD5001) with a sample-ID shortcut for demoing.
Returns & refunds	Dedicated self-serve section live on the same dashboard.
Stock availability	Dedicated self-serve section live on the same dashboard.
Escalation path	"Open a support ticket" fallback for unresolved queries; sets 1-business-day reply expectation.

All three assessment-required ticket categories (order status, returns/refunds, stock availability) are represented on one dashboard — exceeding the minimum two-category MVP bar.

Known-Broken / Limited

Area	Limitation
Data source	App is explicitly flagged "Demo prototype — all data is simulated." Not yet wired to Northstar's real order, returns, or inventory systems.
Authentication	No account verification observed before an order ID returns results — anyone with an order number can view it.
Ticket routing	The "open a support ticket" action was not tested end-to-end against a live queue/CRM in this review — confirm before go-live.
Hardening	No load, security, or error-handling review yet (invalid/edge-case order IDs, rate limits).

Handoff Steps for Northstar's Team

- 1. Connect real data:** Replace simulated order/return/stock data with live API calls to Northstar's order management and inventory systems.
- 2. Add identity checks:** Require an email/account match (or similar) before an order ID surfaces personal order details.
- 3. Wire the ticket button:** Confirm "open a support ticket" creates a real ticket in Northstar's support queue, not just a UI action.
- 4. QA edge cases:** Test invalid order IDs, empty states, and error messages before removing the "demo prototype" banner.
- 5. Assign an owner:** Name one internal Northstar contact for bug triage and monitoring post-handoff.
- 6. Pull full audit trail:** Repo (github.com/Livingpr/The-Northstar-Sprint-Assignment) and board history are available for context on design decisions.

Prepared as part of the Northstar Sprint Team Charter (Task 10 — Go-Live 1-Pager). Live app: northstar-support-buddy.lovable.app
